

Finance Sheet- Data Log

Retrieved 2 missing dates and approximated the remaining 11. Note: In video I say other 9 when I mean to say 11.

Added Type Field to three transaction columns. Added Withdrawal, Deposit, and Transfer to appropriate cells. Manually added Credit Payment Type to Credit Payments in Withdrawal column.

Combined Withdrawals, Deposits, and Transfers into the same set of columns.

Changed Paycheck names on summary page, reformatted them, and added them to the aggregated set of transactions as Deposits.

Transferred transactions into a CSV file titled transactions.csv and created column titled category in Column D, between the Item and Amount column.

Fed transactions.csv into Categorizer. Categorizer was running on gemma3:12b. I recreated the model and reran the analysis (not shown in video) when I noticed the prompt did not have all the necessary instructions.

Found 8 non-compliant results from AI model in output- transaction_UPDATED.csv. Manually updated those. Not in video: Model switched gas and gasoline, using gasoline twice. There was a gift card category mistakenly created by me when manually categorizing gift transactions. These can be observed at 13:47 in the video. These were also corrected but not shown.

Transferred transaction_updated.csv data to transactions_post_AI.xlsx.

Updated the date field to be read as a short date.

Created pivot table and chart to see expenses by category.

Created pivot table and chart to see number of visits to different dining locations. Used a value filter on COUNT of Item > 2.
